EDUCATION

ABES Engineering College

Bachelor of Technology in Computer Science and Engineering

Aug. 2023 – May 2027

9.7 SGPA

EXPERIENCE

CircuitVerse (Open Source)

Dec. 2025 – Present

Contributor

Remote

- Contributing to CircuitVerse, a production open-source digital logic simulator with 1.2k+ GitHub stars, submitting merged PRs fixing bugs and improving core functionality across **Ruby on Rails, JavaScript, and Vue.js**.

Hacktoberfest

Oct. 2025

Open Source Contributor

Remote

- Contributed to multiple open-source projects, earned the **Highest Contribution Badge** for volume and quality of merged pull requests across diverse repositories.

PROJECTS

Mergathon Dashboard | Next.js 15, TypeScript, GitHub GraphQL API, GitHub Actions, Recharts, Node.js

- Built a **real-time leaderboard dashboard** tracking contributor PRs, issues, and team scores for the CircuitVerse open-source hackathon; engineered a **cron-driven ETL pipeline** via GitHub Actions that fetches and transforms GitHub data automatically with **ETag-based conditional requests** to stay within API rate limits.
- Implemented a **snake-draft auto-balancer algorithm** that groups contributors by score into fair teams and outputs **YAML-based middleware configs** for instant event deployment — demonstrating config-driven, integration-style engineering.

PingMD | Next.js, TypeScript, Node.js, Express.js, REST API, Vercel

- Built and deployed a **full-stack doctor appointment booking platform** with real-time availability scheduling, doctor profiles, and a responsive booking flow, structured as a monorepo with separate frontend/ (Next.js App Router) and server/ (Node.js + Express REST API) directories.
- Shipped entirely in **TypeScript** end-to-end and deployed to production on Vercel; demonstrates ability to design and integrate **custom REST API middleware** connecting a Next.js frontend to a Node.js backend.

watcher | LangGraph, Python, Node.js, Redis Streams (Kafka-compatible), Docker, Nginx, Groq API, WebSockets

- Built a **production-grade agentic system** detecting GitHub spam PRs via an **8-detector weighted scoring pipeline** and a LangGraph AI agent (Llama 3.3-70b via Groq), 6 Docker microservices communicate entirely over **Redis Streams** — event-driven architecture, zero direct HTTP between services.
- Secured with **HMAC-SHA256 webhook verification**, JWT-authenticated **WebSocket dashboard** streaming live agent reasoning, and Nginx rate limiting — fully deployed on Oracle Cloud via Cloudflare Tunnel.

ScriptStream | LangGraph, React.js, Node.js, MongoDB, ChromaDB, Gemini API, Socket.io

- Built an agentic AI system to digitize handwritten prescriptions via a **6-node LangGraph pipeline** handling OCR, structured data extraction, clinical validation, and drug safety analysis — end-to-end LLM orchestration across multiple agent nodes.
- Implemented **RAG-based drug interaction validation** using ChromaDB and real-time prescription processing via **Socket.io**; structured output stored in MongoDB for scheduling and downstream workflows.

SKILLS

Languages & Frameworks: Python, TypeScript, JavaScript, Node.js, Next.js, React.js, Express.js, C++

AI & LLM: LangGraph, Groq API (Llama 3.3-70b), Gemini API, ChromaDB, RAG pipelines, LLM agent orchestration

Data & APIs: PostgreSQL, MongoDB, Prisma ORM, GitHub REST & GraphQL API, Webhooks, Redis Streams, ETags, ETL pipelines

Tools & Infra: Docker, Nginx, GitHub Actions, Vercel, Netlify, Git, Ubuntu
